

Product information

Miniwringer

Characteristics

- suitable for all Greenspeed® microfiber cloths;
- presses all superfluous liquid out of the cloth;
- fast and easy to use.

Are you already an enthusiastic user of the Greenspeed® microfiber products? Then you also know that the best result is achieved with damp [microfiber cloth](#). The Greenspeed® Miniwringer is an ergonomic aid for wringing microfiber cloths. This spares your wrists and prevents complaints.

The Miniwringer is equipped with two rubber cylinders, which press the cloth. The Miniwringer has been developed especially for microfiber cloths, whereas thick products like mops or pads will cause the cylinders to jam, which may result in irreparable damage.

Clamp the wringer onto a (available separately) single or double bucket combination.

Specifications
